

# CLINICAL & RELATED WASTE

Ace Waste provides a safe, compliant and environmentally friendly solution for the disposal of clinical, cytotoxic and pharmaceutical waste.

## CLINICAL & RELATED WASTE

### Complete destruction of pathogens

We guarantee that microorganisms and pathogens, present in waste streams, are destroyed, ensuring that they pose no harm to the environment.

### An ecologically sustainable alternative

Ace Waste leads the way in environmentally sustainable waste management with a combustion process that transforms waste into renewable energy.

Our clean energy solution converts biomedical waste into renewable energy sources.

### 30% of clinical waste is comprised of plastics

Sending these plastics to landfill is not an environmentally friendly solution as they do not degrade. When incinerated, these plastics serve as a rich energy source and is the cleanest solution for these wastes.

Did you know it's the generator's responsibility to ensure the correct disposal of the Clinical & Related waste, as per legislative requirement? With 30 years knowledge, Ace Waste personnel are highly educated and will execute correct management of your Clinical & Related waste.

A photograph of a modern, multi-story industrial building with large windows and a sign that reads "ACE WASTE". The building is set against a blue sky with light clouds. A large red graphic overlay covers the right side of the image, containing text and a list of waste types.

Our world class methodologies safely destroy waste streams generated by clinical and healthcare operations including:

- Clinical waste
- Cytotoxic waste
- Discarded sharps
- Human tissue waste
- Laboratory waste
- Pharmaceutical waste

A complete solution for your waste management needs.

- Ace Waste works with major organisations, hospitals, medical facilities, veterinarian surgeries, laboratories, blood banks, emergency services and similar practices to provide the safe and compliant handling, transportation and disposal of clinical waste.
- A major audit found that 14% of clinical waste, in Australia, was mixed with pharmaceutical waste and not incinerated, in breach of legislative requirements.
- Ace Waste can conduct detailed audits of Clinical & Related waste streams and offer correct segregation education and training to facilities.
- Australian legislation requires that cytotoxic and pharmaceutical waste is disposed of by high temperature incineration. Ace Waste provides the complete disposal of this waste at our high temperature incineration facilities in Victoria and Queensland. Incineration reduces costs by eliminating the need for the manual segregation of waste and leaves no residue.
